Aerosol-aware microphysics

Microphysics in WRF, RAP, HRRR, etc.

- Aerosol-aware scheme operational in HRRR/RAP since 23Aug2016

Thompson, G. and T. Eidhammer, 2014: A study of aerosol impacts on clouds and precipitation development in a large winter cyclone. *J. Atmos. Sci.*, **71**, 3636–3658.

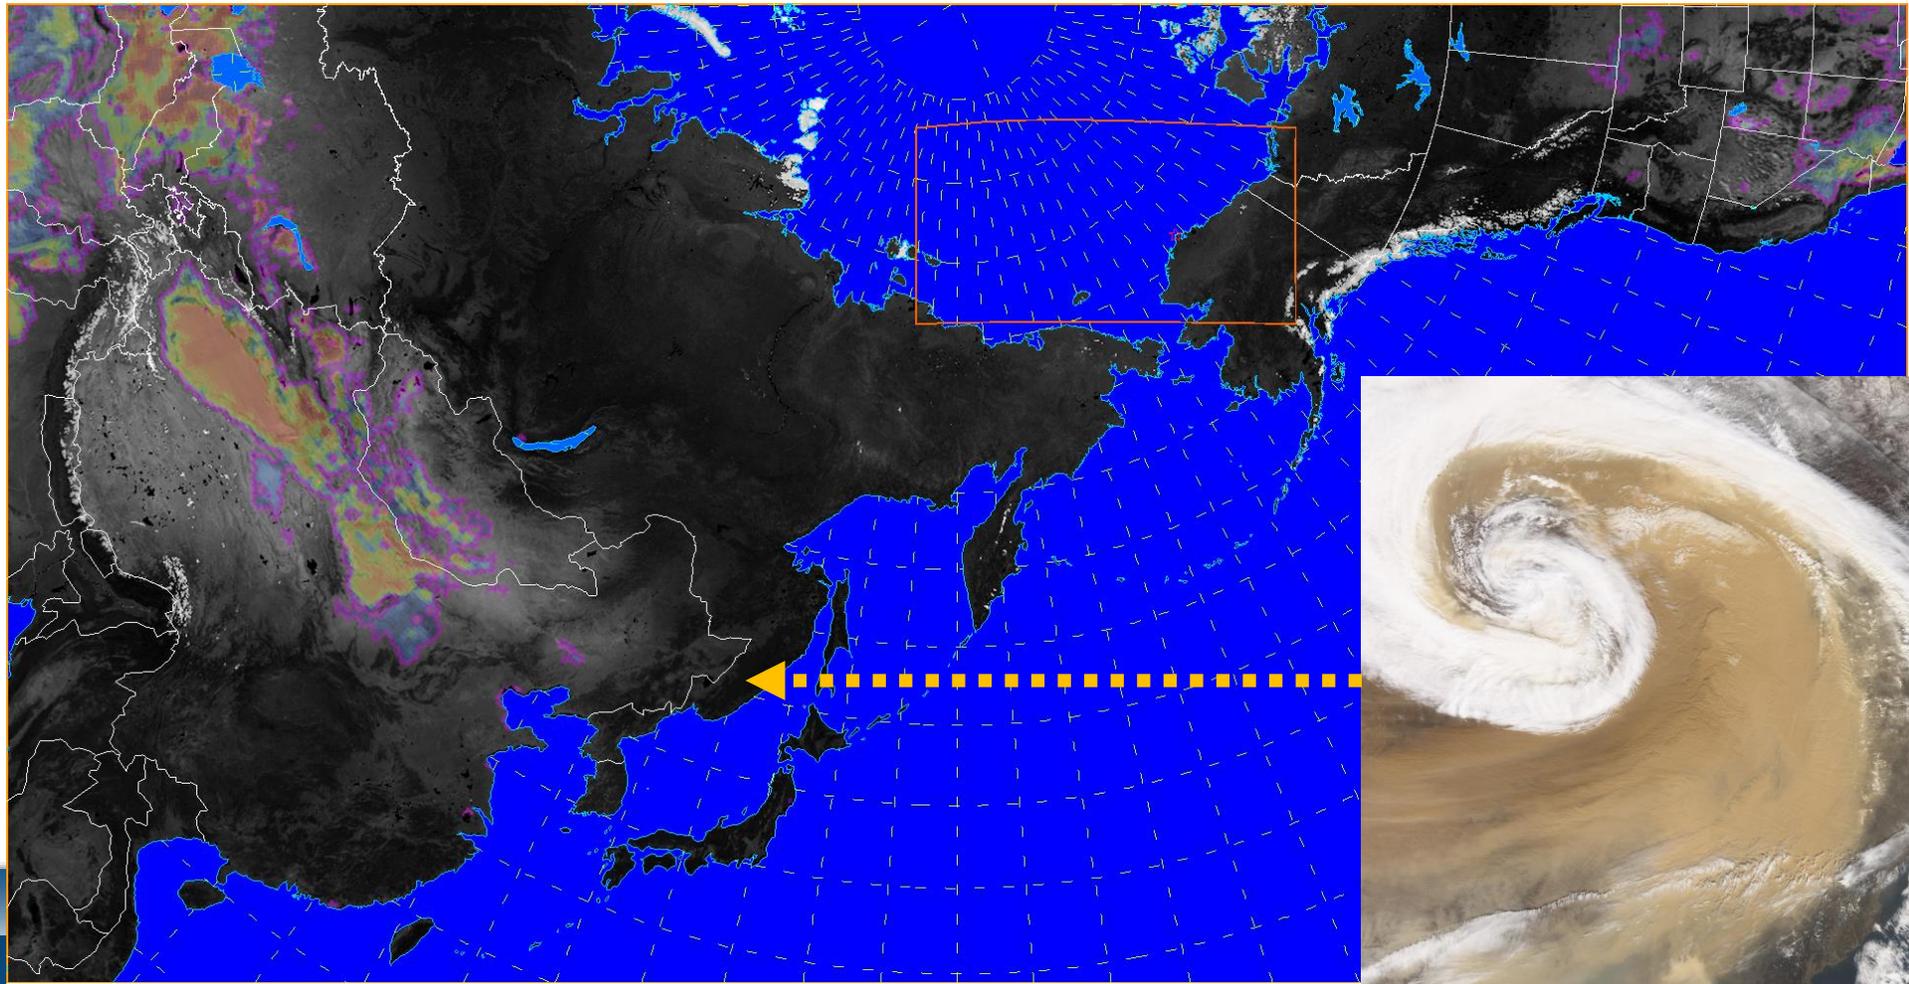

Fundamental, 1st order aerosol treatment (NWP)

- activation of CCN & IN
- depletion of aerosols – precip scavenging
- simplistic aerosol replenishment (surface emissions)
 - now including surface dust parameterization (GOCART)
- ensure physics consistency between prior scheme and new one
- directly couple with radiation for direct/indirect effects

Dust Emission Scheme

Originally from WRF-Chem GOCART

- Enhanced “erodibility” using MODIS visible satellite climatological albedo

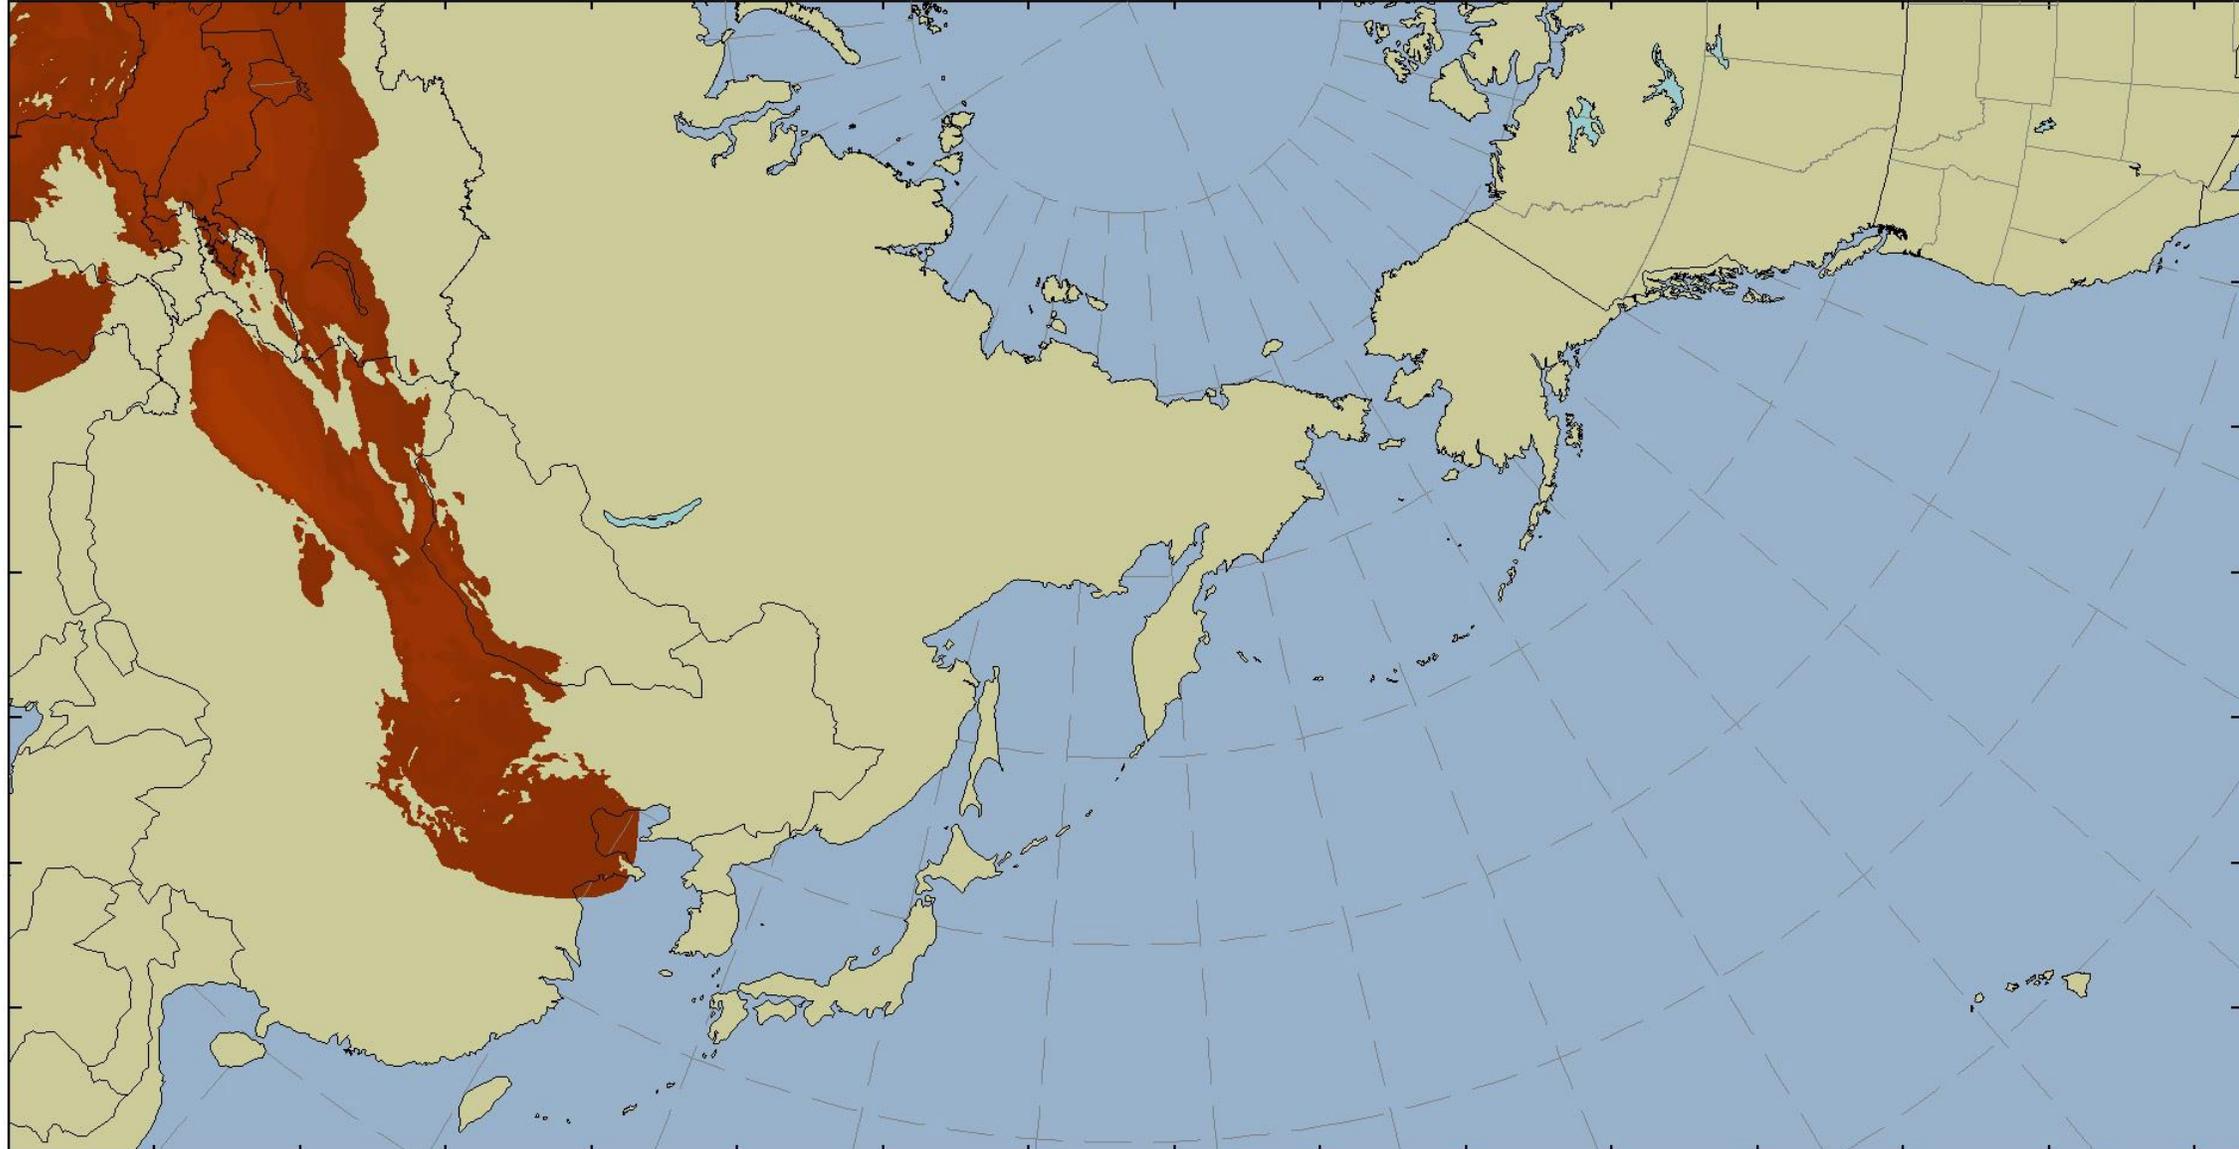

Dust Emission Example Simulation (10-day)

0-hour forecast valid 00:00:00 UTC 10 Mar 2012

initial time: 00z 10Mar

v3.9+dust

Aerosol Optical Depth (AOD)

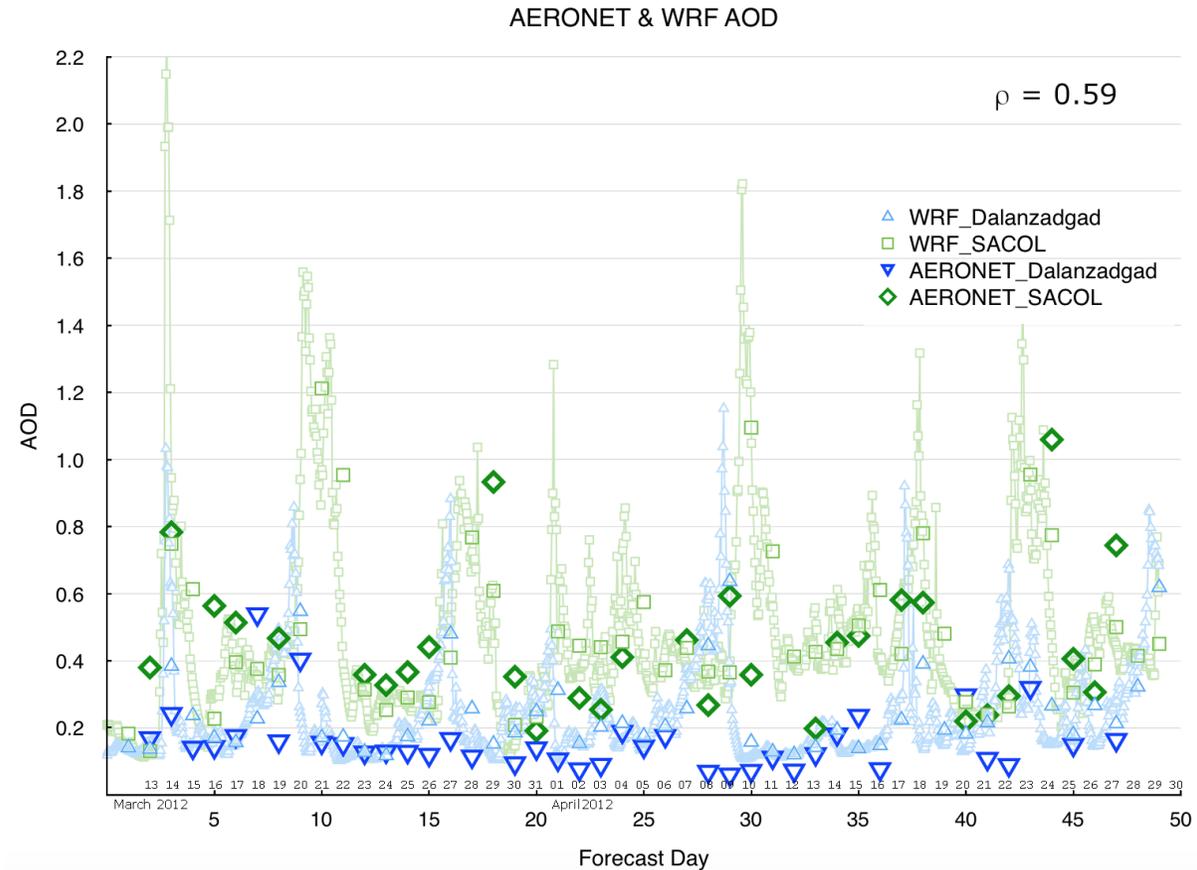

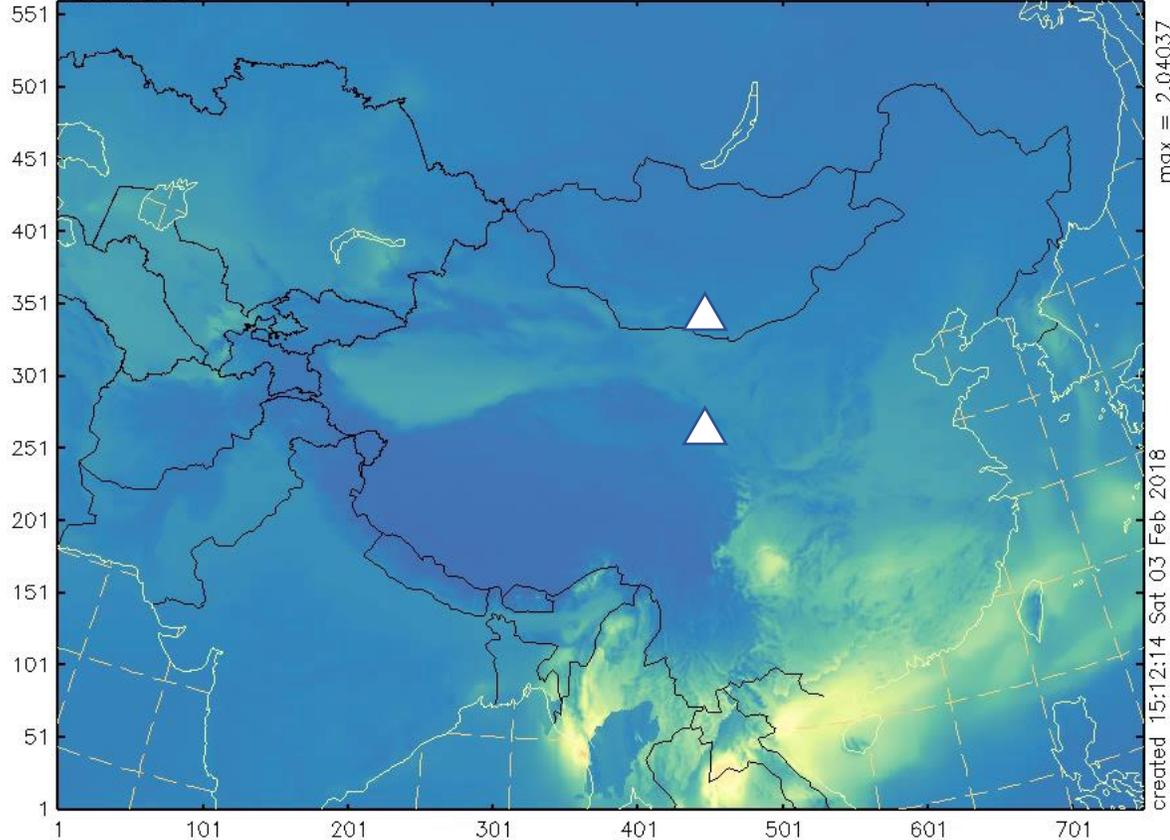

Included into RRTMG-SW scheme

- 50-day simulation, comparison of 2 AERONET sites in China

Aerosol Optical Depth (AOD; 550nm)

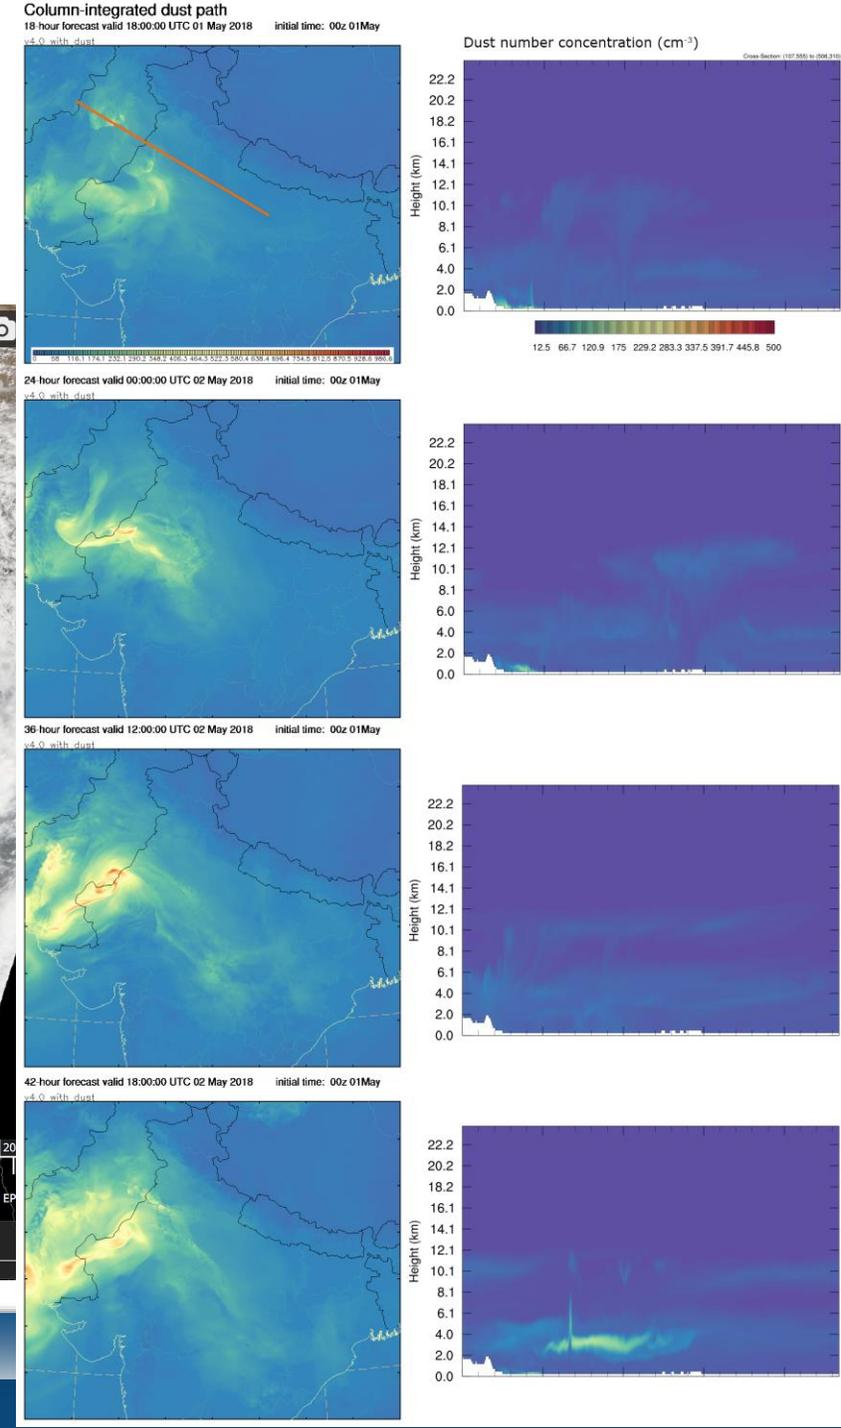

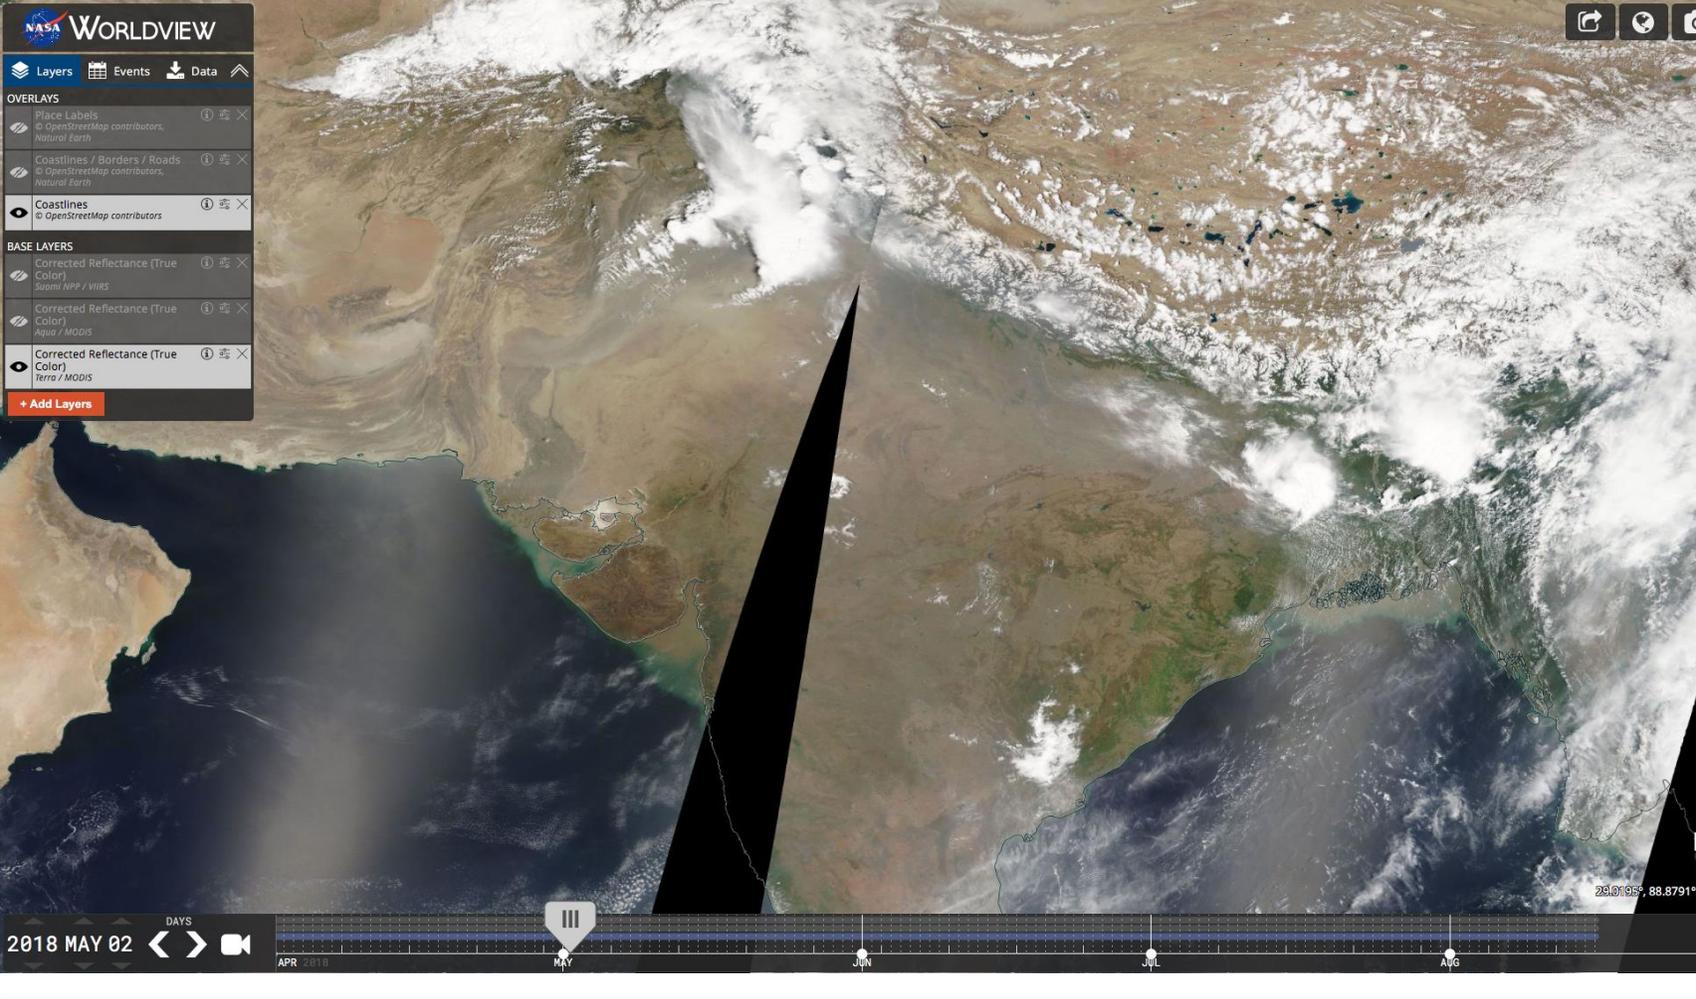

1-hour forecast valid 01:00:00 UTC 10 Mar 2012 initial time: 00z 10Mar

v3.9+dust

Dust Storm in India

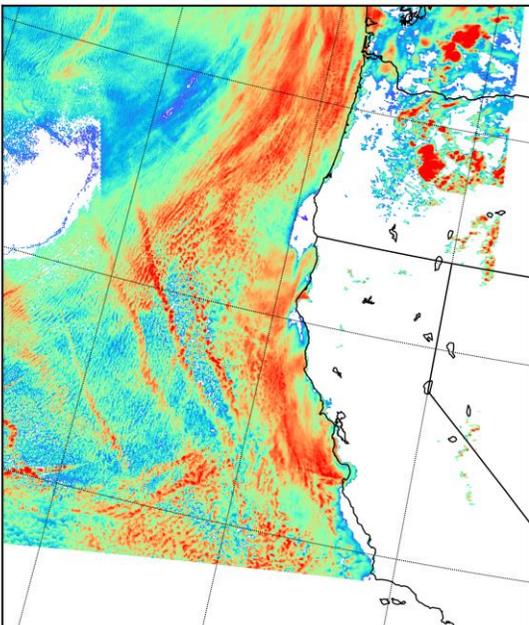

MCS moves across Indo-Gangetic Plain (IGP)

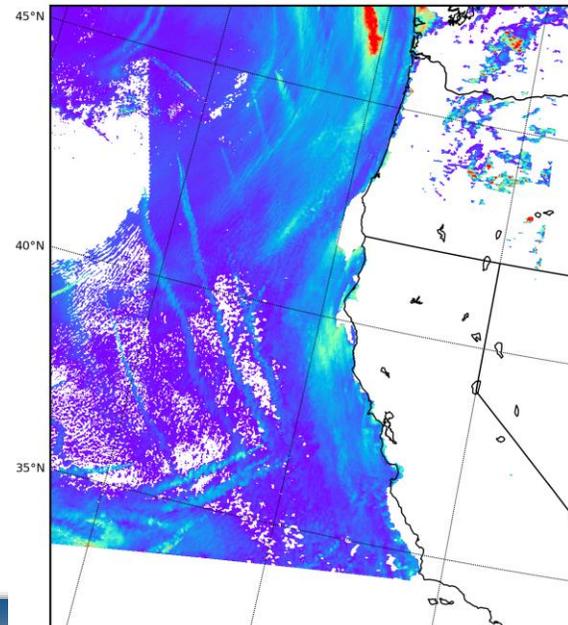

Ship Tracks

2012Jul14

WRF Simulated Ship Tracks

Aerosol number conc (cm⁻³)

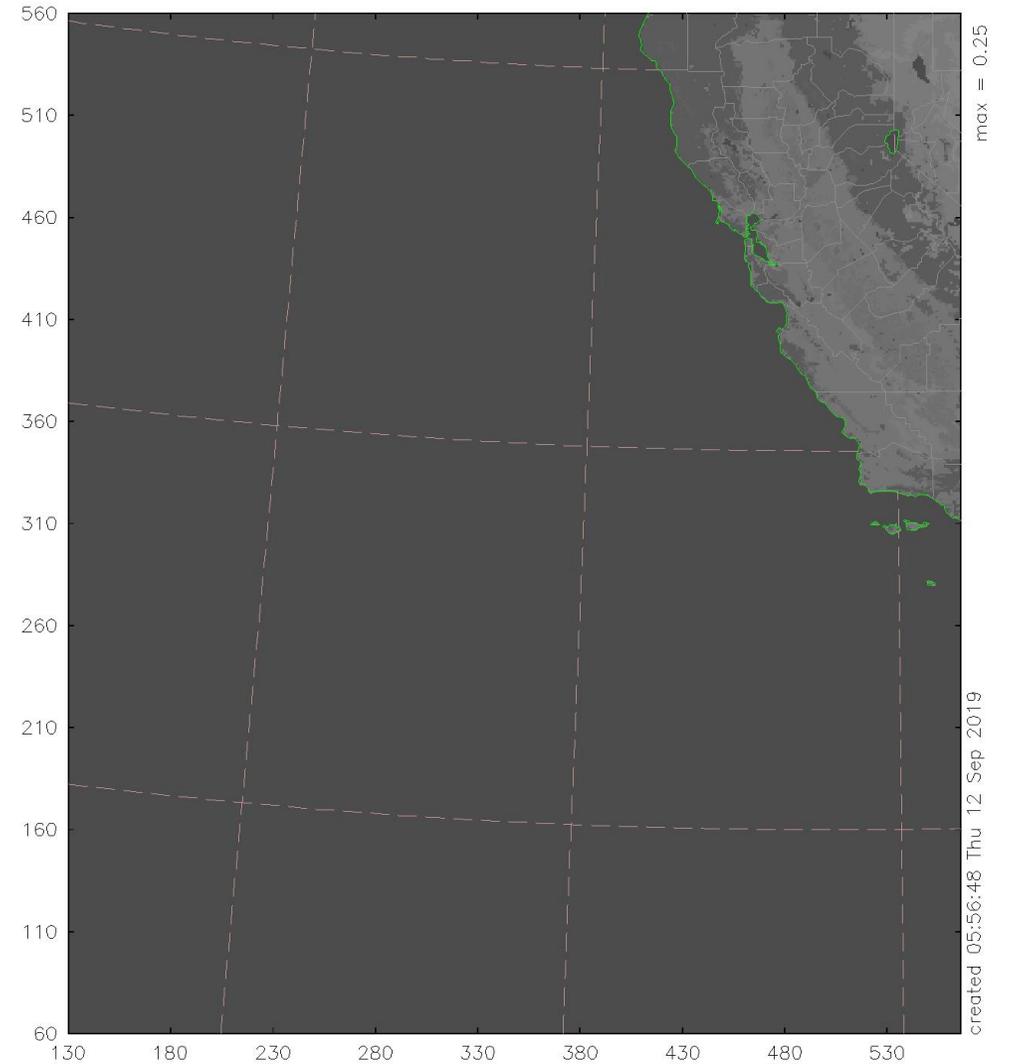

0-hour forecast valid 00:00:00 UTC 14 Jul 2012 initial time: 00z 14Jul

v4.0 PLUS

Satellite visible albedo

0-hour forecast valid 00:00:00 UTC 14 Jul 2012 initial time: 00z 14Jul

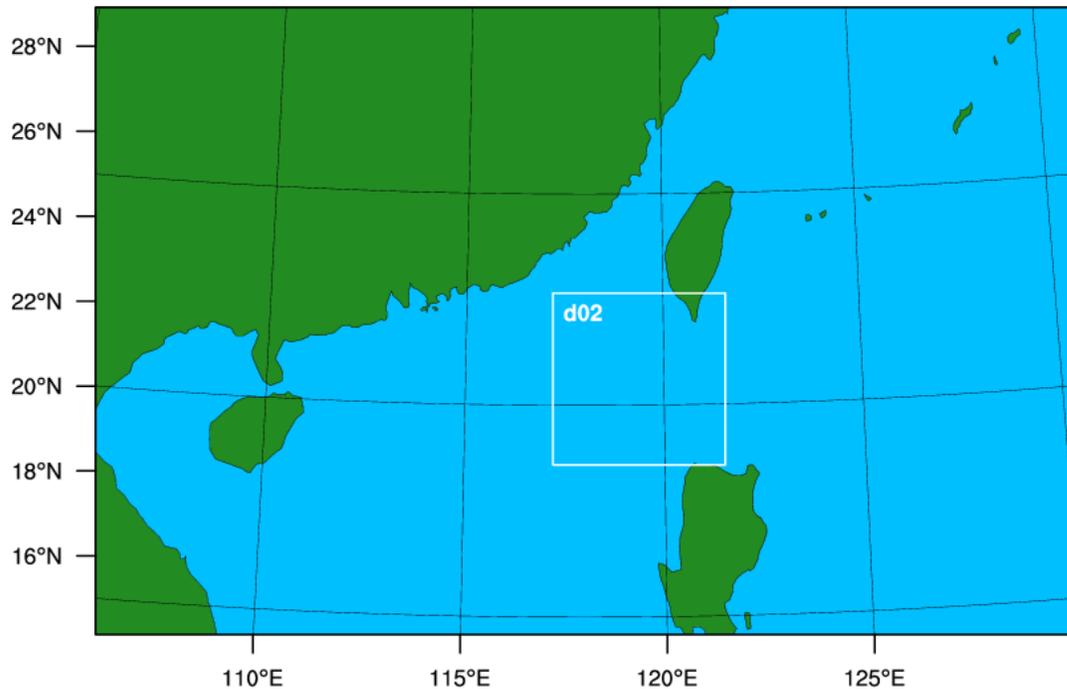

Aerosol impacts on landfalling tropical cyclones in China

Storms: 4 currently (at least 4 more)

WRF-model simulations

5-km spacing with 1-km vortex following nest

Aerosols: urban increase of 4X, 8X, 16X, 32X, 64X

Evaluations

Track & Intensity

Radial and Tangential Winds

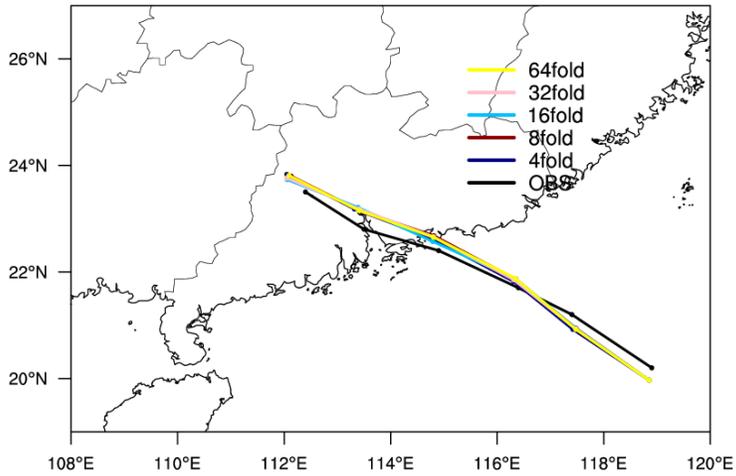

Updraft strength

Precipitation (regional & quadrants)

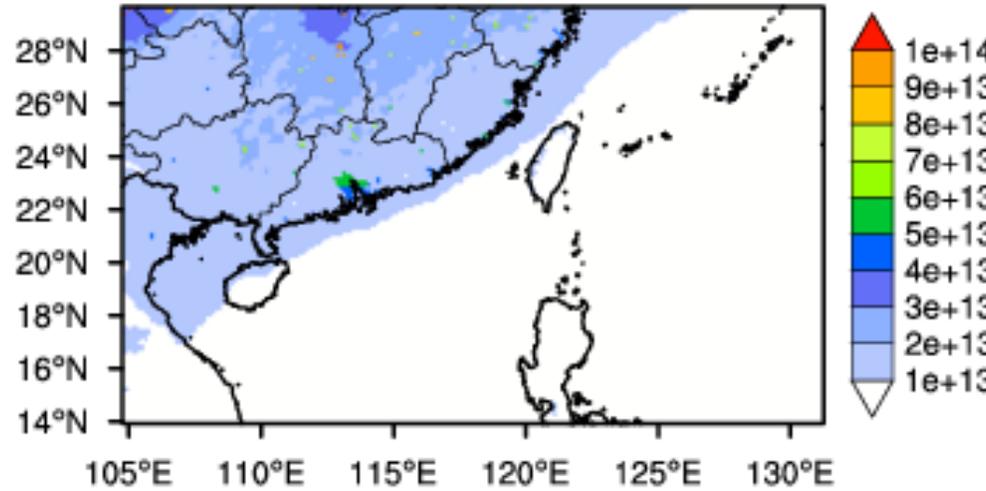

Cloud and rain profiles (mass/number)

Typhoon Nida (2016Aug01)

Updrafts

experiment differences
more – less aerosols
within 150km of center

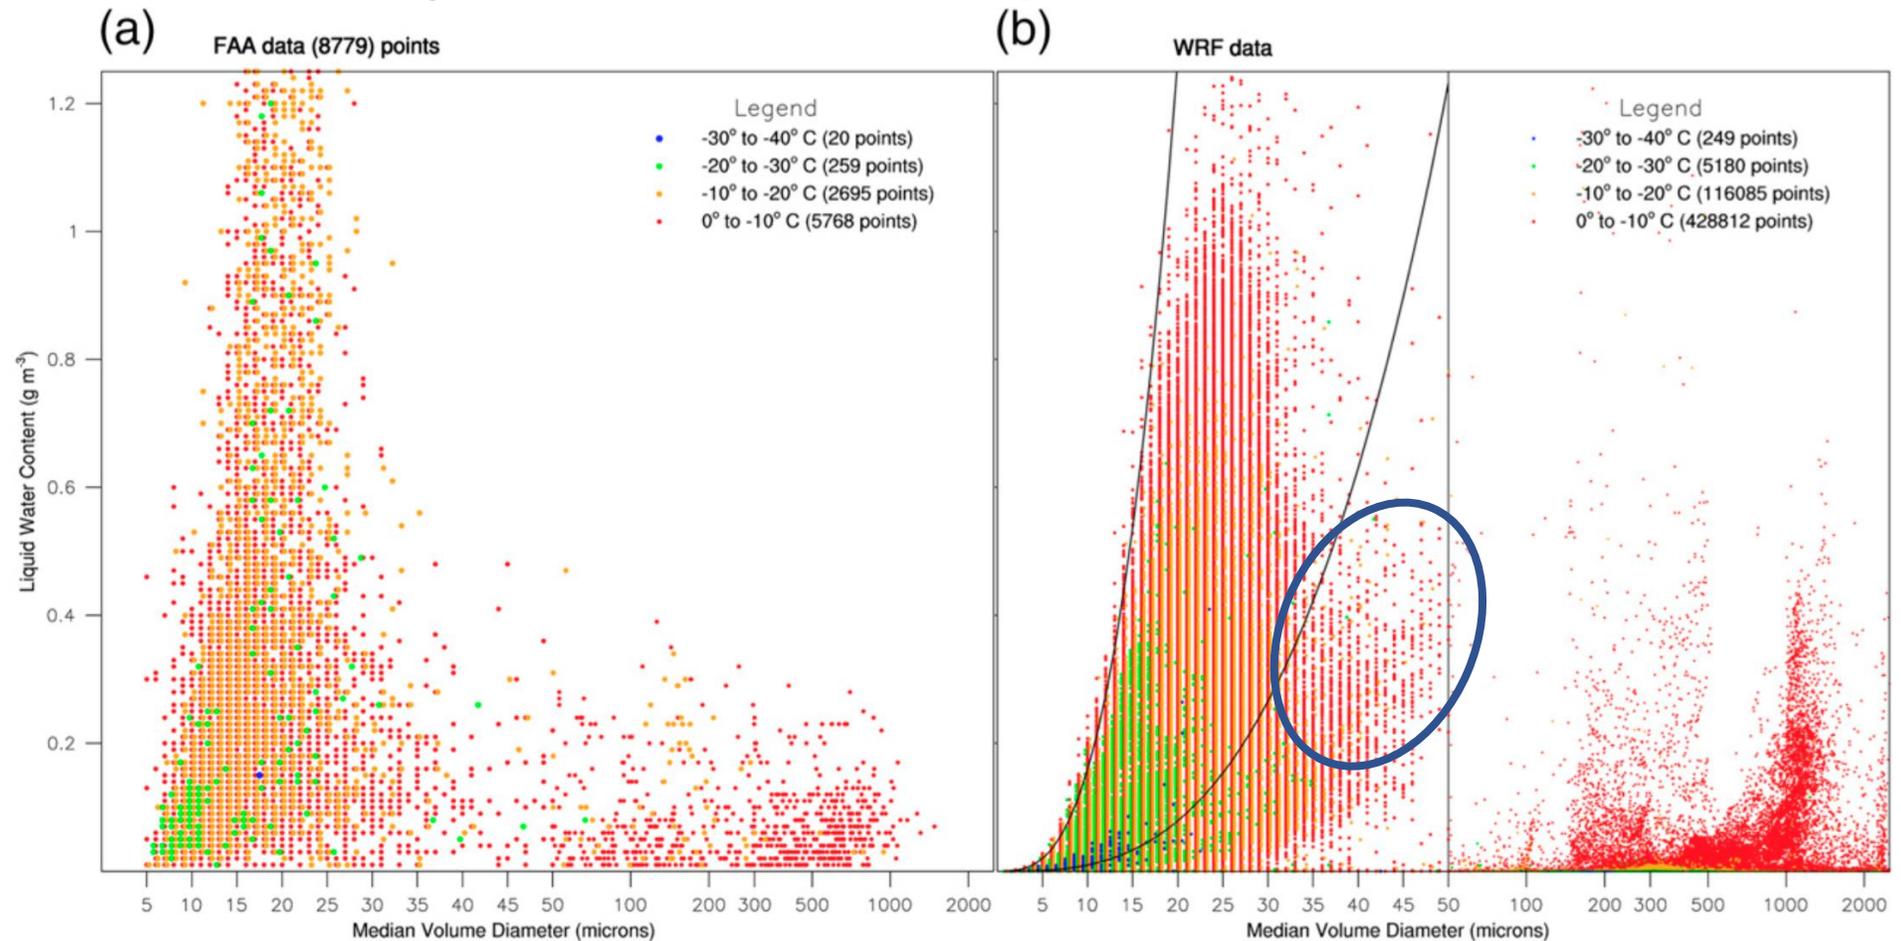

Aerosol-aware microphysics

13-year WRF simulation CONUS 4-km spacing

- WRF icing (Temp, LWC, MVD) versus FAA Tech. Ctr. icing database

Thompson, G., M. Politovich, and R. Rasmussen, 2017: A numerical model's ability to predict aircraft icing environments. *Wea & Forecasting*, **32**, 207–221.

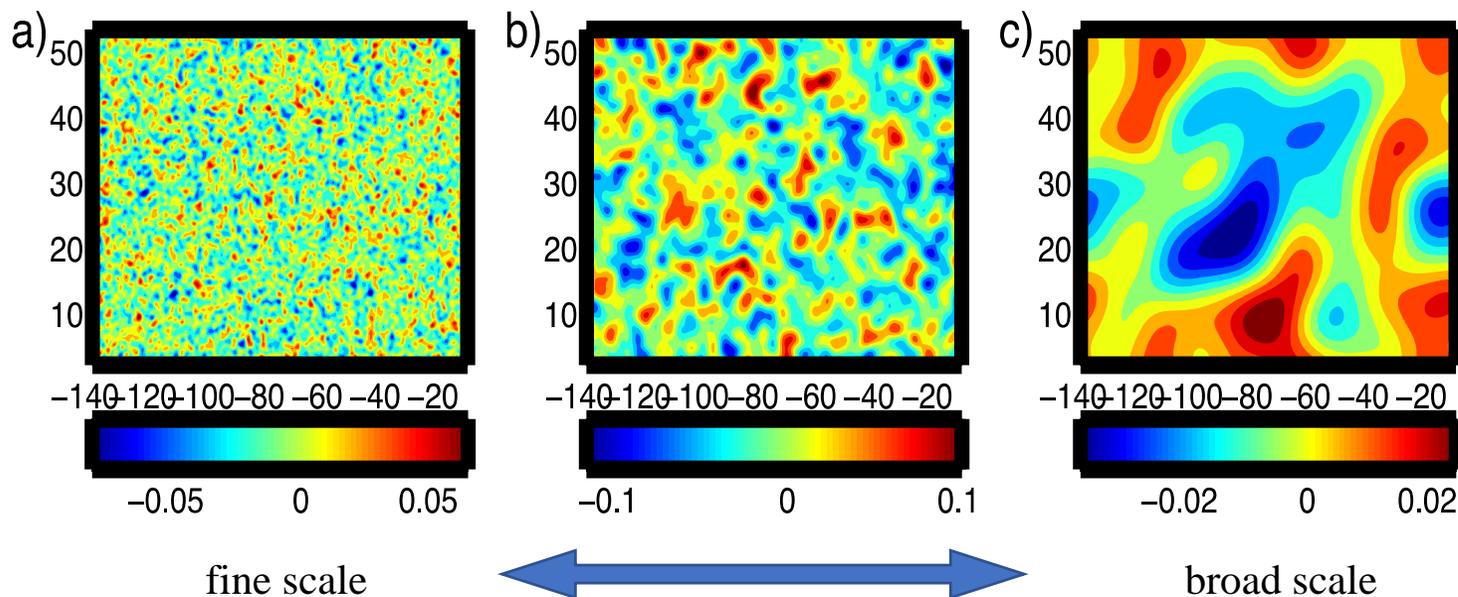

Stochastic Parameter Perturbations

Within microphysics alter CCN & IN activation

- Addressing known single-parameter uncertainties

Griffin, S., J. Otkin, G. Thompson, M. Frediani, J. Berner, and F. Kong, 2019: Assessing the Impact of Stochastic Perturbations in Cloud Microphysics using GOES-16 Infrared Brightness Temperatures. *Mon. Wea. Rev.*, submitted.

Experiment list

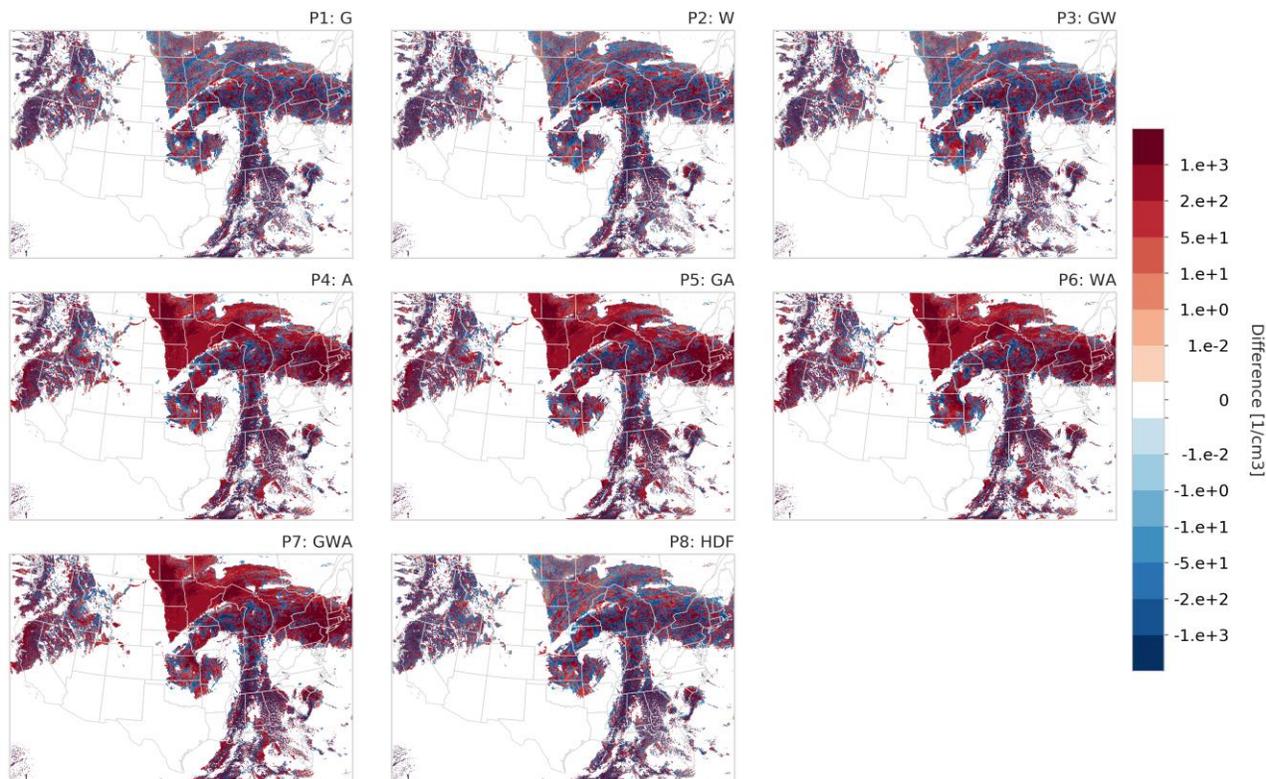

0	Control
WN	White noise
P1-G	Graupel
P2-W	Water (μ)
P3-GW	Graupel + Water
P4-A	Aerosol (CCN+IN)
P5-GA	Graupel + Aerosol
P6-WA	Water + Aerosol
P7-GWA	Graupel + Water + Aerosol
P8-HDF	Higher Diffusion

Stochastic Parameter Perturbations

Very clear signals of 1st and 2nd aerosol indirect effects

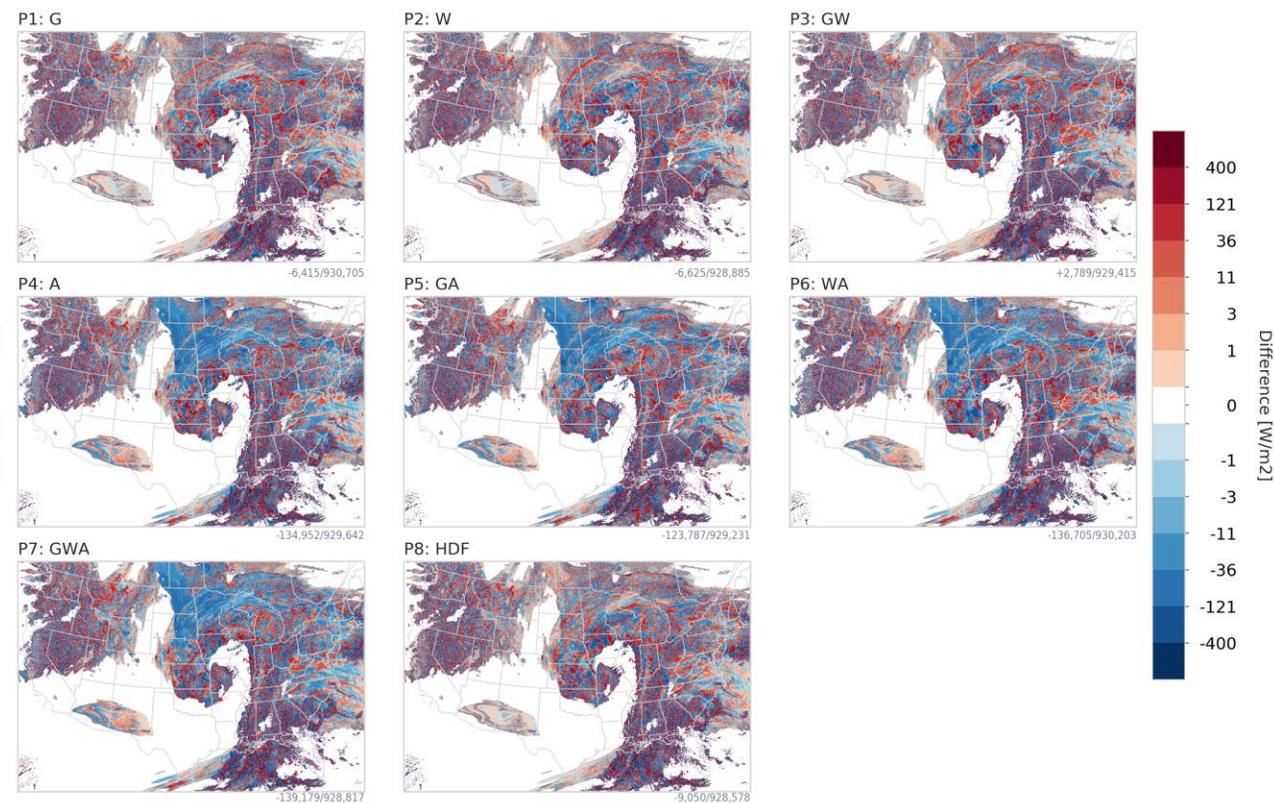

Difference in Cloud drop number (vert integ.)

2018-01-21_00Z +42h
Cloud Droplet Number Concentration: Exp-Cntrl

Difference in Shortwave radiation (at surface)

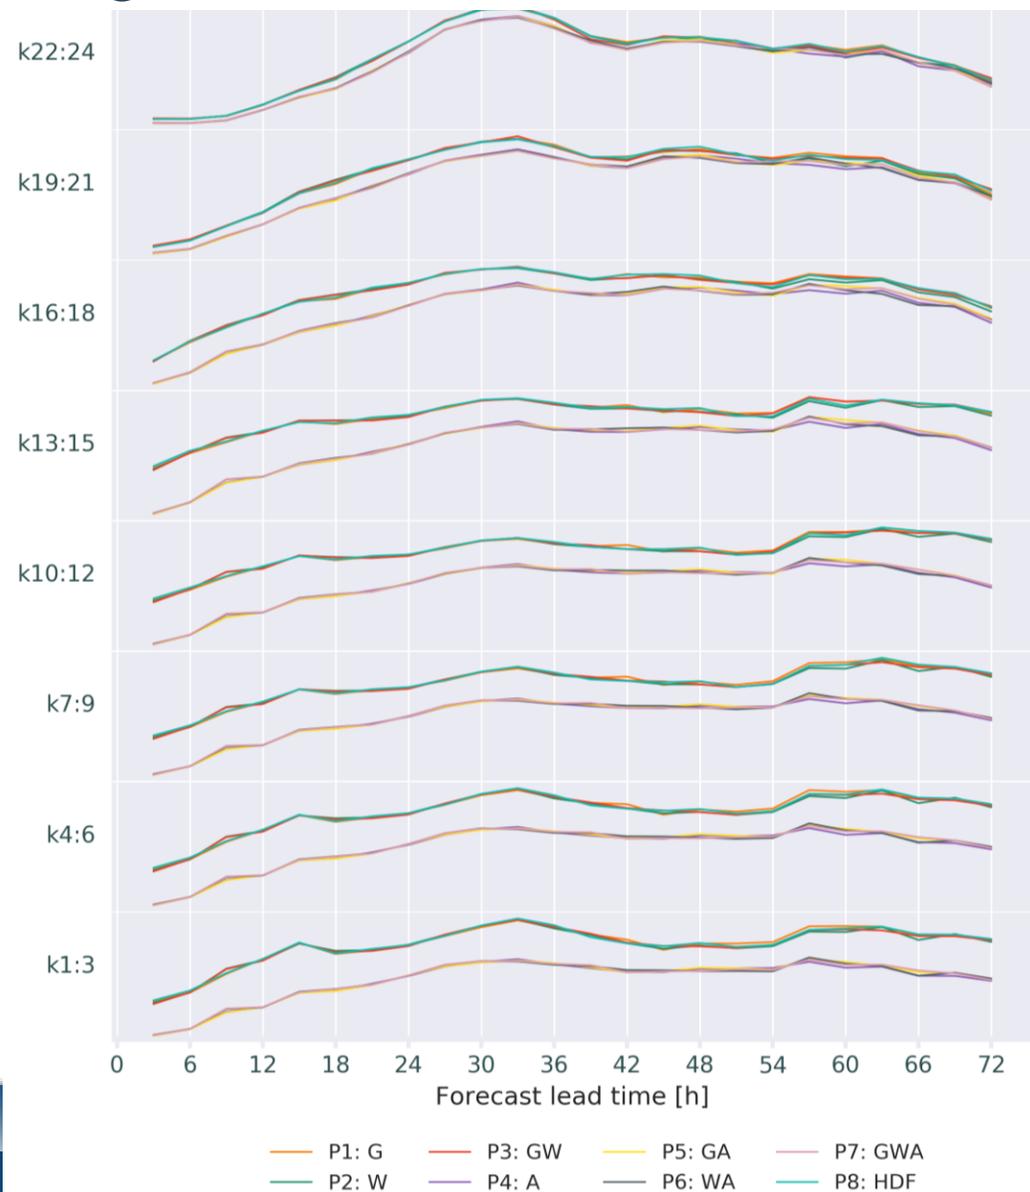

2018-01-21_00Z +42h
Shortwave Down Bottom: Exp-Cntrl

Stochastic Parameter Perturbations

Very clear signals of 1st and 2nd aerosol indirect effects

**Rain content
(by altitude)**
